1. Write the sounds of your name, not English spelling.

Example idea: use the closest historical sound sign for each sound or syllable.

2. Use these quick approximations for the activity:

 a / aa	 i / ee / approx. e	 u / oo / approx. o
 k	 g	 kh / x
 ch	 j	 t
 d	 th	 p
 b	 f	 n
 m	 y	 v / w
 r	 l	 s
 z	 sh	 h

Important for the game:

- Old Persian cuneiform is not a modern Persian alphabet and does not have an exact sign for every modern name sound.
- Modern sounds such as q/gh, zh, and exact e/o may need the nearest approximation.
- Use special syllabic signs (ku, gu, ji, tu, di, du, nu, mi, mu, vi, ru) when they match the name better.
- For the activity, consistency and closest-sound matching matter more than reconstructing an ancient spelling.

Historical sign inventory: Unicode Standard 17.0 Old Persian block; see also Encyclopaedia Iranica, "Cuneiform Script."
